

THOMAS JOSEPH

Cloud Engineer (Aspiring) — AWS · DevOps · Cloud Infrastructure

Buffalo, NY • thomasjosephkusa@gmail.com • [linkedin.com/in/thomas-joseph](https://www.linkedin.com/in/thomas-joseph)

SUMMARY

Master's student in Computer Science with a focus on cloud infrastructure. Building hands-on experience deploying containerized applications, serverless workflows, and CI/CD pipelines on AWS. AWS Certified Cloud Practitioner, seeking an internship or entry-level role in cloud engineering or DevOps.

EDUCATION

University at Buffalo | Master's Student, Computer Science *Expected 2027*
Buffalo, NY

Amaljyothi College of Engineering | Bachelor of Technology, Computer Science *2019 – 2023*

EXPERIENCE

Event Intern | Student Engagement, University at Buffalo *Aug 2026 – Dec 2026*

- Support the planning, marketing, and execution of large-scale campus events as part of the Student Engagement office.
- Coordinate on-site logistics and engage directly with attendees to help deliver a smooth event experience.
- Participate in weekly staff meetings and training sessions to build leadership and project management skills.

Flutter Developer Intern | Dart, Flutter *2 months*

- Completed a 2-month internship building mobile application features using Flutter and Dart.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, S3, Lambda, ECS Fargate, ECR, Rekognition, IAM)

Tools & Version Control: Git, Docker

Programming: Python, Dart

Design: Figma

CERTIFICATIONS

- AWS Certified Cloud Practitioner — Amazon Web Services

PROJECTS

Containerized Flask API on AWS | Docker, ECR, ECS Fargate, ALB

- Building a REST API with Flask, containerized with Docker, and deployed on AWS using ECR, ECS Fargate, and an Application Load Balancer.
- Working incrementally through containerization, infrastructure as code, CI/CD automation, and monitoring to build production-style deployment skills.

AI-Assisted E-Commerce Platform | Java Spring Boot, React, AWS

- Built a full-stack e-commerce application with a Spring Boot backend and React frontend, incorporating AI-assisted features, and deployed it on AWS.

Image Identifier using AWS Rekognition | S3, Lambda, EC2, Rekognition

- Built an event-driven image recognition pipeline: images uploaded to S3 trigger a Lambda function that runs analysis through AWS Rekognition, served from EC2.
